AI Engineer

Summary

Applied AI engineer and University of Sydney Honours graduate who builds and ships production agentic systems end to end. Built an M365-native agentic email triage system for an enterprise client, a deployed LangGraph communications platform on GCP, and a healthcare ML pipeline across 100,000+ records that I presented to client executives. Full Australian work rights, no sponsorship required.

Experience

Web Engineer Intern

Jun 2026 – Present

Webvine, Sydney, NSW

Microsoft and SharePoint consultancy delivering M365 solutions for enterprise clients.

- Built an agentic HR email triage system within a client’s M365 tenant: Power Automate triggers on inbound emails, Copilot Workflows ground AI-drafted replies against SharePoint policy documents, and Adaptive Card approval flows post to Teams for human sign-off before sending.
- Status logged to a SharePoint list for a full compliance audit trail; no infrastructure required outside the client’s existing M365 environment.

Software Engineer Intern

Nov 2024 – Feb 2025

HealthShare via Jacaranda Flame Consulting, Sydney, NSW

Embedded with HealthShare, custodian of Australia’s national healthcare practitioner directory, to build an ML data validation system from scratch.

- Built a validation pipeline over 100,000+ practitioner records using KMeans Clustering, Isolation Forest, and Neural Networks in Python, scikit-learn, and PostgreSQL, reaching 84% accuracy on a proof of concept.
- Projected a 65% cut in manual verification workload, approximately \$400,000 in annual labour savings if productionised; presented findings directly to the CEO, CTO, and senior leadership.

Projects

Hermes, AI Communications Manager

LangGraph, FastAPI, Anthropic Claude API, GCP Cloud Run

- Built an agentic communications platform on LangGraph, integrating Twilio and Supabase, deployed as a production service on GCP Cloud Run with state persistence and conditional branching across threads.

Lumina, Local-First AI Desktop Companion

TypeScript, Electron, LangGraph, Ollama, sqlite-vec

- Built an on-device AI companion with no cloud dependency; LangGraph StateGraph evaluates 5 behavioural gates before engaging, hybrid RAG pipeline (vector KNN via sqlite-vec, BM25, cross-encoder reranking) at sub-250ms retrieval, 8-state cognitive activity classifier.

ScreenBridge, Privacy-First Desktop Control SDK

Python, FastAPI, Microsoft Presidio

- Open-source MCP middleware enabling LLM agents to control desktop environments; 3-layer vision architecture (Accessibility API, Vision Detector, DOM extraction) with in-flight PII redaction via Presidio.

Technical Skills

AI / Agentic: LangGraph, RAG pipelines (BM25 + vector, cross-encoder reranking), Ollama, Anthropic Claude API, M365 Copilot Workflows, multi-agent systems, scikit-learn, pandas

Languages: Python, TypeScript, JavaScript, SQL, Java, C

Cloud / Infra: GCP Cloud Run, AWS, Docker, Power Automate, SharePoint

Backend / Frontend: FastAPI, Node.js, PostgreSQL, Supabase, MongoDB, React, Electron

Education

Bachelor of Engineering Honours (Software), University of Sydney

Graduated Nov 2025

Second Class Honours, Division 1 – WAM 74.4

- Thesis: Comparative Performance Analysis of KMeans Clustering Variants. Benchmarked 13 variants over 8 datasets and 11 metrics with Friedman and Nemenyi testing; Mini-Batch KMeans retained 85 to 90% cluster quality at 70 to 75% less compute.
